

RSL-Xtender Sell-Setup “Balanced Midgame”

midgame-v3.json — July 2026

Who is it for?

Midgame accounts: you farm dungeons around stages 16-22 (Dragon, Spider, Golem, Fire Knight).

Why this file?

Because your play time is for playing, not for sorting gear! This file applies the recommendations of the reference guides (HellHades, InTeleria, Ayumilove), tuned for midgame. Balanced philosophy: sell what has no future, keep everything with real potential.

The baseline: sold everywhere

Rule	Detail
Common / Uncommon	always sold
Rank $\leq 4\star$	sold (at stages 16+ you drop 5-6 $\star$) — threshold $\leq 3\star$ for premium sets
Rares without a SPD substat	sold (except SPD boots, and already-upgraded pieces)
Chest / gauntlets / boots with a flat main stat (HP/ATK/DEF)	sold

The 4 set tiers (all 69 sets covered)

Tier	Sets	Epic/Legendary rule
T1 — Premium / event	Feral, Merciless, Pinpoint, Stoneskin, Protection, Zeal, Lethal, Supersonic, Slayer, Stonecleaver, Rebirth, Chronophage, Mercurial, Swift Parry, Deflection, Bolster, Defiant, Impulse, Righteous, Killstroke, Instinct, Untouchable, Frostbite, Bloodthirst, Guardian	sold only with NO useful substat at all (SPD, CR, CDMG, ACC, HP%, DEF%, ATK%, +RES for tank sets)
T2 — Farmable core	Speed, Lifesteal, Relentless, Perception, Regeneration, Immortal, Shield, Immunity, Accuracy, Savage, Crit Rate, Crit Damage, Cruel, Reflex, Stalwart, Resilience, Fortitude, Divine sets	kept with ≥ 1 substat matching the set's role (crit for damage sets, SPD/ACC for supports, HP%/DEF%/RES for tanks)
T3 — Situational	Daze, Cursed, Frost, Frenzy, Stun, Toxic, Provoke, Retaliation, Avenging, Curing, Destroy, Fury, Fatal, Affinitybreaker	same as T2, plus: epic $\leq 5\star$ without SPD = sold
T4 — Weak	Life, Offense, Defense, Resistance, Divine Offense	epic without SPD = sold (even 6 $\star$); legendary kept with 1 role substat

Per-slot rules (epic/legendary)

- Boots: SPD main = always kept. % main = kept only with a SPD substat.
- Gauntlets: C.RATE / C.DMG main = kept per set role. Flat mains = sold.
- Chestplate: HP%/ATK%/DEF%/ACC kept per role; RES without SPD = sold; flat = sold.
- Helmet / Weapon / Shield: judged on substats only (role lists).

Accessories (tuned for Spider ~20)

- $\leq 4\star$ sold (Spider 20 drops $\sim 73\%$ $5\star$ and $\sim 27\%$ $6\star$) — except legendaries, always spared.
- Rares without SPD sold; epics with no useful substat sold; $5\star+$ legendaries always kept.
- Flat amulet without SPD or C.DMG: sold. Flat banner without SPD or ACC: sold.
- Refresh / Cleansing / Reaction and premium-set accessories: almost everything kept.

Built-in safeties

- Mythicals are never auto-sold (they have two main stats).
- Already-upgraded pieces (level > 4) are protected from the quality rules.
- Legendary accessories are never auto-sold.

Reliability

The semantics of every field of the format (ranks, rarities, main stat, “S:<N” substat groups) were verified against the actual behaviour of RSL-Xtender, and the file was validated on real, log-monitored farming sessions — including the tricky case of good-substat legendaries, which correctly stay in your inventory.

When to move on

At dungeons 24-25 (mostly $6\star$ drops), tighten $5\star$ rares and epics; in Hard mode / Ultra-Nightmare Clan Boss, switch to a lategame profile.
